

Toileting

WHY DOES THIS HAPPEN?

People with Alzheimer's or dementia might:

- have poor control of their body functions
- be taking medications that cause them to urinate a lot
- forget what the bathroom and toilet are used for
- feel embarrassed and ashamed to ask for help
- might not be able to find the bathroom in time
- might not be able to remove their clothes in time

People with Alzheimer's disease or dementia can have accidents when they want to go to the bathroom.

WHAT CAN YOU DO?

ALLOW TIME & BE POSITIVE

- plan for extra time... be patient... don't rush
- stay calm and use a gentle voice
- give one step directions – "let's walk this way, let's come in here"
- think about if the person is embarrassed to get undressed in front of you or a person of a different sex

KEEP THINGS SIMPLE

- find clothes that are easy to take on and off, such as pants with an elastic waist or Velcro instead of buttons
- try to seat the person closer to the bathroom so they don't need to walk as far
- keep a light on in the bathroom so it can be seen when needed
- use a toilet seat with a bright color so that it can be seen easily
- install a raised toilet seat and grab bars – some individuals feel like they are falling when sitting down on a low toilet
- remove anything that looks like a toilet, such as a trash can

KEEP A SCHEDULE

- create a regular schedule for using the toilet: when they wake up, before and after meals, and just before bed
- limit water and other drinks close to bedtime

ACCIDENTS HAPPEN

- be understanding when accidents happen
- stay calm and comfort the person if they are upset
- be prepared with supplies, such as extra clothes and wipes
- if accidents happen suddenly or more often, talk with their doctor about possible reasons – for example, a new medication or an infection may cause this to happen
