

## Transitional Care Center of Seattle

### Facility Overview

Transitional Care Center of Seattle is a Medicaid certified nursing facility operated by Evergreen Healthcare Management, an experienced provider of skilled nursing and assisted living services. TCCS is located at 2611 South Dearborn St., Seattle, WA 98144. This licensed skilled nursing facility specializes in transitional care for patients with complex medical and behavioral needs who are leaving an acute hospital setting. DSHS intends for this facility to serve as an ongoing resource for hospital patients who face discharge challenges.

### Who is Eligible for Admission?

TCCS is designed for dual eligible (Medicare/Medicaid), and fee-for-service Medicaid recipients who may otherwise experience prolonged hospital stays due to transition barriers including:

- Complex medical needs that make transition into traditional post-acute settings difficult.
- Individuals weighing up to 600 lbs. may be considered.
- Substance use disorders that require ongoing support.
- Behavioral health needs including active and present behavioral symptoms.

### Referral & Admission Process:

- DSHS Home & Community Services headquarters reviews all referrals submitted by HCS case managers for TCCS in partnership with Evergreen.
- For referral consideration hospitals must submit a Medicaid application for patients requiring post-discharge services.
- HCS HQ will assess TCCS eligibility after a referral has been completed by the HCS CM.

### Post-Admission Support:

Once admitted to TCCS, HCS provides nursing facility case management to help individuals explore long-term care and community living options.
