

Notes from April 25 meeting

- Discussion of whether table is a 25% or 20% table and process for obtaining history on current table (i.e. is it a 25% table)
- Tim referenced using work performed by prior work group. Consider using the Florida table which is a stable table with lower figures which equates to a residential credit as a whole. Once the lower time parent has more than 35% a residential credit would apply. Kevin expressed concern about recommending a new table as it goes beyond the scope of our subcommittee. Focus may want to be on looking at existing table and going back to use of 25% credit (old calculation) or some tweaking of the old credit.
- Greg (public representative) suggested, if possible, adding language to RCW setting forth if residential time is fought for by lower time parent then lower time parent can obtain credit.
- Group discussed what type of RCW has best chance of being accepted by Work group.

Agenda for next meeting (May 9):

- Discuss Gary's calculations on 25% credit.
- George to look into history of current table.
- Andrew to call Mary Hammerly regarding question pertaining to whether a credit is built into existing table? (Note many of subcommittee members had never heard this).
- Discussion of other proposals
