

**Median Household Income Estimates by County: 1989 to 2009 and Projection for 2010  
October 2010**

In current dollars; series revised 1990 forward. The estimation is based on 1990 and 2000 Census data, and on the Census Bureau's American Community Surveys' estimates for 2006-2009. The estimates shown may differ from other median household income data developed from the Office of Financial Management's State Population Survey, Bureau of the Census estimates, or other sources. Survey data, which are subject to sampling variability and errors, are not necessarily more accurate than the estimate data.

Note: 1989 and 1999 median income values are derived from the 1990 and 2000 U.S. Census of Population and Housing, respectively. Estimates of median household money income for the inter- and post-Census years are based on the Bureau of Economic Analysis (BEA) personal income data and the estimates of household characteristics, at the county level. For 2006-2009: The median household income estimates are anchored upon ACS estimate where available.

\*In addition to the state personal income data published by BEA, the payroll data compiled by the state Employment Security Department are used in the Preliminary estimates of 2009 median household income.

\*\*The Revenue Forecast Council's September 2010 forecast of the state personal income is used in the projection of 2010 median household income.

Prior to 2006: Money income, as defined by the Bureau of the Census, includes wage or salary income, self-employment income, interest, dividend, rental income, social security or other public assistance income, retirement, and disability income; etc. It excludes some components of personal income defined by the BEA. For example, employer-paid pension and medical benefits are included in personal income but not in money income. The median measures the point at which half of all households have more income and half have less.
