

DEVELOPMENTAL DISABILITIES ADMINISTRATION (DDA)

# Monitoring of Side Effects Scale (MOSES)

INSTRUCTIONS: See other side. **Bold items below are usually observable.** Regular print items are usually client verbalization, staff input, or chart review.

SCORING: See other side for details.

0 = None      2 = Mild      4 = Severe  
1 = Minimal    3 = Moderate    NA = Not Assessable

COMMENTS (CROSS – REFERENCE CHART LOCATION IF MORE SPACE IS NEEDED):

PRESCRIBER'S SIGNATURE

DATE

**INSTRUCTIONS:**

1. Explain the purpose of the examination. Observe and examine the client for five - 15 minutes in a quiet area.
2. Perform procedures to ascertain items. For example, flex arm for rigidity, open mouth to check throat and saliva, observe arm swing while walking, etc. If the client is verbal, inquire as to problems. For example, for blurred vision ask, "Are you able to see and read all right?" If not, "Describe this to me." Ask at least one open-ended question such as, "Have you noticed any problems?" Talk to staff and review available data for items unable to be observed during the examination such as eating or sleeping, especially for non-verbal individuals.
3. If a sign or symptom is present, it is scored. This does not mean the clinical manifestation (CM) is a side effect. If a reason for the CM exists, explain in Examiner Comments (or cross-reference prior explanation). For example, severe tremor is scored, but is part of Parkinson's disease.
4. If you are not the prescriber, provide the assessment to the prescriber for review and signature. If an issue of concern is present, immediately contact the prescriber and document.
5. The prescriber reviews the assessment, determines any further action, and signs form.
6. File in client chart according to facility procedure. Review at next scheduled team meeting and document status.

**SCORING:**

- 0 = NOT PRESENT:** Not observed or, if seen, within the range of normal.
- 1 = MINIMAL:** Difficult to detect or easy to detect but occurs only once or twice in a short non-intense manner ("a little bit"). Questionable if the item is in the upper range of normal. The client does not notice or comment on the item
- 2 = MILD:** Infrequent and easy to detect ("sometimes") or an annoyance to the client. While the item does not hinder the client's normal pretreatment functioning level and does not produce extreme discomfort, the item may progress to future severity or problems if ignored.
- 3 = MODERATE:** Frequent and easy to detect ("a lot") or producing some degree of impairment to functioning. Although not hazardous to health, the item is uncomfortable or embarrassing to the client.
- 4 = SEVERE:** Almost continuous, intense, and easy to detect ("all the time") or significant impairment of functioning or incapacitation. The item produces a definite hazard to health or well-being.
- NA = NOT ASSESSED:** An assessment for an item is not able to be made.
