Supplemental Tables. Following Rank Order Presented in Table 2.....	To End

INTRODUCTION

Nationally, an increasing number of employers faced with rising employee health care premium costs either have chosen to drop health care benefits for their employees or to pass on to their employees a greater share of coverage costs. As a consequence, more employees and their dependents either go without health insurance, apply for state purchased health care programs supported with public funds, or seek uncompensated care at hospitals and community clinics.

In response to these trends, the 2006 State Legislature enacted Engrossed Substitute House Bill (ESHB) 3079. This legislation directed the Department of Social and Health Services (DSHS) and the Health Care Authority (HCA) in coordination with the Employment Security Department (ESD) to report annually on the employment status of Medical Assistance clients and Basic Health Program (BHP) enrollees. This report provides both aggregate and employer-specific data related to DSHS Medical Assistance clients and non-client parents with dependents with DSHS medical coverage, as specified in the legislation (enacted as Chapter 264, Laws of 2006 and codified in RCW 70.47.170).

Governor Gregoire signed ESHB 3079, but vetoed the emergency clause included in the bill. The Governor's veto message urged caution when interpreting information provided in this report:

The employer information to be provided by the Health Care Authority (HCA) and the Department of Social and Health Services (DSHS) is not a requirement for enrollment or eligibility. Consequently, data contained in the reports will have been provided on a voluntary basis, and will be unverified. The two reports – an employer specific report and an aggregated report – will originate from separate sources. Therefore, they will not be comparable. The reports will also be based on a point-in-time data collection and will therefore not reflect changes in employment status. These data limitations must be considered when interpreting the reports.

The Governor also noted the programs provide health care services to eligible working persons and expressed concern that the information "not be misconstrued to portray beneficiaries of our Basic Health and Medicaid programs in a negative light."

ESHB 3079 directs DSHS to provide two separate sets of information related to DSHS Medical Assistance clients and non-client parents with dependents with DSHS medical coverage:

- Aggregate data for calendar year (CY) 2005 by industry, firm size, and public/private ownership type. These data are based on ESD quarterly wage data.
- By-firm data for January and June 2006 for employers associated with 50 or more persons with DSHS medical coverage. These data are based on DSHS Automated Client Eligibility System (ACES) employer name data.

DATA SOURCES AND LIMITATIONS

Aggregate data by industry, firm size, and public/private ownership type are based on ESD quarterly earnings data and monthly DSHS medical eligibility data for CY 2005. ESD earnings data do not include self-employment or unreported earnings.

By-firm data are based on ACES employer name data linked to DSHS medical eligibility data for January and June 2006. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

Employer rankings are based on the combined number of associated DSHS medical clients in January and June 2006. If a firm was below the 50-client threshold specified by ESHB 3079 in one of the two months, we suppressed all data for that month and did not use the client count for that month in determining the employer's rank.

The tables report the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated "member months" by type of coverage. Coverage type was determined based on Medicaid Management Information System (MMIS) program, match, and medical codes.

The Family Medical coverage group includes persons receiving TANF and related medical coverage. The Children's Medical and SCHIP programs provide medical coverage to children in families that do not meet TANF eligibility criteria but have household income below 200 percent (Children's Medical) or 250 percent (SCHIP) of the Federal Poverty Guidelines. This coverage group also includes a small number of children enrolled in Foster Care or Adoptions Support coverage. The Pregnant Women program provides Medicaid coverage to low-income pregnant women. The

Persons with Disabilities coverage group includes persons enrolled in Medicaid Disabled, Medicaid Blind, General Assistance, and Alcohol and Drug Abuse Treatment and Support Act (ADATSA) coverage. The "Other" coverage group includes a small number of persons receiving DSHS medical coverage through programs for refugees and the elderly. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the employed person had to be identified as the head of household, spouse, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings.

To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employed person, we associated the dependent with the person who had the highest earnings. For the CY 2005 aggregate data tables, per member per month HRSA Medical Assistance expenditure estimates were based on the average of November 2006 forecast per capita estimates for SFY 2005 and SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2005 and SFY 2006.

For the by-firm tables, per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

KEY FINDINGS

1. In the average quarter in CY 2005, there were 107,900 persons with DSHS medical coverage and ESD-reported earnings in the quarter (see Table 1A "All Firms"). This represents 12 percent of all persons with DSHS medical coverage in the average quarter in CY 2005.
2. In the average quarter in CY 2005, there were 132,162 employed non-client persons with dependents with DSHS coverage (see Table 1B "All Firms").
3. Combining employed clients and non-client persons, there were 240,062 employed clients or non-client persons with dependents with DSHS medical coverage in the average calendar quarter in CY 2005 (see Table 1 "All Firms").
4. Employed non-client persons with dependents with DSHS medical coverage worked more hours than employed DSHS medical clients. Median hours per week were 35 for employed non-client persons, compared to 17 hours per week for employed clients.
5. In the average quarter in CY 2005, there were 425,765 DSHS covered lives associated with employed DSHS clients and persons with dependents with DSHS medical coverage. This represents 46 percent of all persons with DSHS medical coverage in the average quarter in CY 2005.
6. There were about 4.8 million months of DSHS medical coverage associated with employed DSHS clients and non-client persons with dependents with DSHS medical coverage. Forty-eight percent of the medical coverage months were associated with employed DSHS clients (2,279,507 months), and 52 percent were associated with employed non-client persons with dependents with DSHS coverage (2,518,600 months).
7. Estimated DSHS medical and mental health expenditures for the months of coverage associated with employed clients and non-client persons with dependents with DSHS coverage were \$1.12 billion in CY 2005 (all funds). Of this total, \$651 million were associated with employed DSHS medical clients, and \$469 million were associated with employed non-client persons with dependents with DSHS medical coverage.
8. Associated annual DSHS coverage costs were greatest for persons employed in the following industries: Health and Social Assistance (\$163 million); Retail Trade (\$154 million); and Accommodation and Food Services (\$143 million).
9. Almost all (92 percent) of the annual DSHS coverage costs were associated with private employers (\$1.036 billion), as opposed to public employers (\$84 million).

Health Services Account	\$229,910	\$232,905

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

2. MCDONALDS

Clients or persons with dependents with DSHS medical coverage, by type of DSHS coverage

In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

Health Services Account	\$56,623	\$58,586

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

Associated DSHS Medical Clients	432	378
Family Medical	319	294
Children's Medical and SCHIP	52	37
Pregnant Women	44	34
Persons with Disabilities	13	10
Other Coverage	4	3
Monthly HRSA Expenditures - All Funds	\$129,717	\$111,371
General Fund-State	\$59,912	\$52,183
General Fund-Federal	\$65,900	\$56,431
Health Services Account	\$3,905	\$2,757

Non-client persons with DSHS-covered dependents

	January 2006	June 2006
Number of Employed Persons	279	271
Associated DSHS Medical Clients	415	414
Family Medical	76	63
Children's Medical and SCHIP	328	340
Pregnant Women	9	9
Persons with Disabilities	2	2
Other Coverage	0	0
Monthly HRSA Expenditures - All Funds	\$80,021	\$78,620
General Fund-State	\$14,459	\$12,882
General Fund-Federal	\$41,145	\$40,355
Health Services Account	\$24,418	\$25,383

TOTAL

	January 2006	June 2006
Number of Employed Clients/Persons	501	498
Associated DSHS Medical Clients	847	792
Family Medical	395	357
Children's Medical and SCHIP	380	377
Pregnant Women	53	43
Persons with Disabilities	15	12
Other Coverage	4	3
Monthly HRSA Expenditures - All Funds	\$209,738	\$189,990
General Fund-State	\$74,370	\$65,065
General Fund-Federal	\$107,045	\$96,786
Health Services Account	\$28,323	\$28,140

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

Associated DSHS Medical Clients	605	562
Family Medical	186	153
Children's Medical and SCHIP	365	360
Pregnant Women	48	46
Persons with Disabilities	4	3
Other Coverage	2	0
Monthly HRSA Expenditures - All Funds	\$145,579	\$134,426
General Fund-State	\$43,646	\$38,451
General Fund-Federal	\$74,779	\$69,176
Health Services Account	\$27,153	\$26,799

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

Health Services Account	\$21,896	\$22,716

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

Health Services Account	\$21,318	\$20,181

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

Health Services Account	\$9,510	\$9,676

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

General Fund-Federal	\$26,168	\$33,002
Health Services Account	\$14,097	\$15,835

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

General Fund-Federal	\$25,094	\$28,966
Health Services Account	\$12,090	\$14,772

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employed person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

Health Services Account	\$10,513	\$9,837

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employed person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

Health Services Account	\$8,646	\$8,275

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

General Fund-Federal	\$23,446	\$21,119
Health Services Account	\$11,012	\$9,945

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

General Fund-Federal	\$17,768	\$22,354
Health Services Account	\$9,226	\$11,629

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

Associated DSHS Medical Clients	146	193
Family Medical	44	79
Children's Medical and SCHIP	94	104
Pregnant Women	4	6
Persons with Disabilities	4	4
Other Coverage	0	0
Monthly HRSA Expenditures - All Funds	\$31,639	\$43,151
General Fund-State	\$8,423	\$13,316
General Fund-Federal	\$16,158	\$22,025
Health Services Account	\$7,059	\$7,810

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

Health Services Account	\$4,889	\$5,075

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

General Fund-Federal	\$12,654	\$13,011
Health Services Account	\$6,694	\$6,555

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

General Fund-Federal	\$13,886	\$17,093
Health Services Account	\$3,266	\$3,884

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

Health Services Account	\$6,899	\$6,212

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employed person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employed person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

General Fund-Federal	\$11,973	\$12,078
Health Services Account	\$5,279	\$4,174

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employed person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employed person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

Health Services Account	\$2,397	\$2,548

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

Associated DSHS Medical Clients	98	83
Family Medical	12	4
Children's Medical and SCHIP	81	75
Pregnant Women	5	4
Persons with Disabilities	0	0
Other Coverage	0	0
Monthly HRSA Expenditures - All Funds	\$20,125	\$16,341
General Fund-State	\$3,724	\$2,345
General Fund-Federal	\$10,446	\$8,621
Health Services Account	\$5,955	\$5,376

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

Clients or persons with dependents with DSHS medical coverage, by type of DSHS coverage

Associated DSHS medical clients and estimated DSHS HRSA medical and mental health expenditures

PREPARED BY: DSHS Research and Data Analysis Division, originally published November 2006, REVISED November 2007

DSHS employed clients and their DSHS-covered dependents

	January 2006	June 2006
Number of Employed Clients	5	12
Associated DSHS Medical Clients	7	25
Family Medical	2	18
Children's Medical and SCHIP	5	5
Pregnant Women	0	0
Persons with Disabilities	0	2
Other Coverage	0	0
Monthly HRSA Expenditures - All Funds	\$1,295	\$5,775
General Fund-State	\$258	\$2,743
General Fund-Federal	\$662	\$2,657
Health Services Account	\$375	\$375

Non-client persons with DSHS-covered dependents

	January 2006	June 2006
Number of Employed Persons	31	35
Associated DSHS Medical Clients	66	79
Family Medical	12	12
Children's Medical and SCHIP	52	64
Pregnant Women	2	3
Persons with Disabilities	0	0
Other Coverage	0	0
Monthly HRSA Expenditures - All Funds	\$12,956	\$15,794
General Fund-State	\$2,419	\$2,885
General Fund-Federal	\$6,696	\$8,102
Health Services Account	\$3,841	\$4,806

TOTAL

	January 2006	June 2006
Number of Employed Clients/Persons	36	47
Associated DSHS Medical Clients	73	104
Family Medical	14	30
Children's Medical and SCHIP	57	69
Pregnant Women	2	3
Persons with Disabilities	0	2
Other Coverage	0	0
Monthly HRSA Expenditures - All Funds	\$14,251	\$21,569
General Fund-State	\$2,677	\$5,628
General Fund-Federal	\$7,358	\$10,760
Health Services Account	\$4,216	\$5,182

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

General Fund-Federal	\$10,277	\$11,980
Health Services Account	\$4,355	\$5,257

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employed person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employed person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

Health Services Account	\$4,184	\$4,860

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employed person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

Monthly HRSA Expenditures - All Funds	\$18,557	\$16,696
General Fund-State	\$5,645	\$3,845
General Fund-Federal	\$9,350	\$8,614
Health Services Account	\$3,562	\$4,238

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employed person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

Associated DSHS Medical Clients	39	61
Family Medical	26	43
Children's Medical and SCHIP	1	2
Pregnant Women	0	0
Persons with Disabilities	8	9
Other Coverage	4	7
Monthly HRSA Expenditures - All Funds	\$12,928	\$20,130
General Fund-State	\$6,487	\$10,296
General Fund-Federal	\$6,366	\$9,684
Health Services Account	\$75	\$150

Non-client persons with DSHS-covered dependents

	January 2006	June 2006
Number of Employed Persons	19	16
Associated DSHS Medical Clients	25	21
Family Medical	0	5
Children's Medical and SCHIP	22	14
Pregnant Women	0	0
Persons with Disabilities	1	1
Other Coverage	2	1
Monthly HRSA Expenditures - All Funds	\$5,885	\$4,980
General Fund-State	\$1,245	\$1,396
General Fund-Federal	\$2,988	\$2,532
Health Services Account	\$1,652	\$1,051

TOTAL

	January 2006	June 2006
Number of Employed Clients/Persons	44	49
Associated DSHS Medical Clients	64	82
Family Medical	26	48
Children's Medical and SCHIP	23	16
Pregnant Women	0	0
Persons with Disabilities	9	10
Other Coverage	6	8
Monthly HRSA Expenditures - All Funds	\$18,813	\$25,110
General Fund-State	\$7,731	\$11,693
General Fund-Federal	\$9,354	\$12,216
Health Services Account	\$1,727	\$1,202

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employed person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

Health Services Account	\$3,079	\$3,562

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

Pregnant Women	1	0
Persons with Disabilities	2	2
Other Coverage	0	0
Monthly HRSA Expenditures - All Funds	\$13,565	\$12,605
General Fund-State	\$2,943	\$2,830
General Fund-Federal	\$6,949	\$6,466
Health Services Account	\$3,674	\$3,310

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employed person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employed person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

Health Services Account	\$3,465	\$3,616

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

430. COLUMBIA REACH

Clients or persons with dependents with DSHS medical coverage, by type of DSHS coverage

General Fund-Federal	\$6,526	\$7,134
Health Services Account	\$2,447	\$2,822

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

General Fund-Federal	\$5,071	\$6,556
Health Services Account	\$3,079	\$2,854

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employed person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employed person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

General Fund-State	\$12,741	\$12,829
General Fund-Federal	\$14,866	\$14,925
Health Services Account	\$1,501	\$1,688

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employed person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employed person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employed person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

499. GREAT AMERICAN CASINO

Clients or persons with dependents with DSHS medical coverage, by type of DSHS coverage

Associated DSHS medical clients and estimated DSHS HRSA medical and mental health expenditures

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employed person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employed person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employed person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

511. U S WAX POLYMER

Clients or persons with dependents with DSHS medical coverage, by type of DSHS coverage

Associated DSHS medical clients and estimated DSHS HRSA medical and mental health expenditures

PREPARED BY: DSHS Research and Data Analysis Division, originally published November 2006, REVISED November 2007

DSHS employed clients and their DSHS-covered dependents

	January 2006	June 2006
Number of Employed Clients	6	.
Associated DSHS Medical Clients	41	.

Health Services Account	\$1,234	.

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

Monthly HRSA Expenditures - All Funds	\$12,603	.
General Fund-State	\$5,355	.
General Fund-Federal	\$6,422	.
Health Services Account	\$826	.

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employed person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

DATA SOURCES: This report is based on the analysis of Automated Client Eligibility System (ACES) employer name data linked to Medicaid Management Information System eligibility data. ACES employer name information does not permit the identification of separately owned franchises operating under the same business name. The employer name information used in this report is self-reported; it is not a required element of the application for public assistance and is not independently verified by DSHS.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employed person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

TECHNICAL NOTES: The table reports the number of DSHS clients or persons with dependents with DSHS medical coverage who were employed, and the associated member months by type of coverage. Coverage type was determined based on MMIS program, match, and medical codes. Clients who received only Take Charge family planning coverage were excluded.

Employed non-client persons with dependents with DSHS medical coverage were counted if they were part of a household with at least one person who received DSHS medical coverage. To be counted, the person had to be identified as the head of household, spouse of the head of household, or unmarried co-parent of a child in common with the head of household.

Counts of employed clients or persons with dependents with DSHS medical coverage were associated with a single "primary employer" in each month. The vast majority of employed clients or persons with dependents with DSHS medical coverage had a single employer in the month. In cases where the person had more than one employer in the month, the primary employer was defined to be the employer from whom the person received the greatest earnings. To create an unduplicated count of member months and HRSA expenditures associated with employed persons, in the cases where a dependent was associated with more than one employer person, we associated the dependent with the person who had the highest earnings. Per member per month HRSA Medical Assistance expenditure estimates were based on November 2006 forecast estimates for SFY 2006. Per member per month HRSA Mental Health expenditure estimates were based on statewide average RSN capitation rates for SFY 2006.

562. TRIPLE B CORP

Clients or persons with dependents with DSHS medical coverage, by type of DSHS coverage

Associated DSHS medical clients and estimated DSHS HRSA medical and mental health expenditures

PREPARED BY: DSHS Research and Data Analysis Division, originally published November 2006, REVISED November 2007
